An elementary school teacher in New York State had her purse stolen. The thief had to be Lillian, Judy, David, Theo, or Margaret.

When questioned, each child made three statements:

Lillian: (1) I didn’t take the purse. (2) I have never in my life stolen anything. (3) Theo did it.

Judy: (4) I didn’t take the purse. (5) My daddy is rich enough, and I have a purse of my own. (6) Margaret knows who did it.

David: (7) I didn’t take the purse. (8) I didn’t know Margaret before I enrolled in this school. (9) Theo did it.

Theo: (10) I am not guilty. (11) Margaret did it. (12) Lillian is lying when she says I stole the purse.

Margaret: (13) I didn’t take the teacher’s purse. (14) Judy is guilty. (15) David can vouch for me because he has known me since I was born.

Later, each child admitted that two of their statements were true and one was false. Assuming this is true, who stole the purse?
